Assemblin secures power contract for E.ON Energidistribution

Assemblin Electrical has signed an agreement with E.ON Energidistribution AB (E.ON) for a new 130/30 kW substation in the Municipality of Alvesta. The new substation will serve a major solar plant. Assemblin Electrical will conduct work for an order value of about SEK 50 million.

Assemblin Electrical holds a turnkey contract for the project, which includes design, materials, installation and testing of the equipment included to achieve a fully functional and operational plant. Work on the substation is expected to continue until the third quarter of 2027.

“Power is one of Assemblin Electrical’s focus areas, and we are proud to have been awarded yet another power project in which we are the turnkey contractor. It is particularly pleasing that this is a project within the green transition as the switchgear is being built connected to a large solar plant. Our local project managers and organisation have extensive experience in power and we look forward to the task of supporting E.ON in meeting current and future energy needs efficiently and sustainably,” says Fredrik Allthin, EVP and Head of Division Sweden.

“Assemblin won the tender in competition with others, with the award being based on the most economically favourable bid, and we are now looking forward to beneficial cooperation in this important project,” says Maria Stever, Purchaser at E.ON.

When completed, the plant will produce fossil-free electricity equivalent to the annual domestic electricity consumption of 15,000 single-family homes. The park covers 98 hectares, with solar panels covering about a third of the land.
