

Assemblin

Assemblin receives large order from Coromatic for data center project in Stockholm

Assemblin has been selected by Coromatic as a contractor in a large data center project in Stockholm, Sweden with an order value just over SEK 400 million.

Coromatic is one of the leading suppliers of critical infrastructure for data centers and mission-critical facilities in the Nordics. In the new project, Assemblin will be responsible for the design, planning and installation of energy-efficient and sustainable building technology solutions within several technical areas. The assignment places particular focus on the coordination between technical disciplines, which is crucial in large projects with high demands on operational reliability, quality, work environment and schedule.

“Data centers are one of our strategic growth areas where we have a strong market position, and we are very pleased to be able to contribute to this exciting project. This assignment is an example of our ability to handle large, complex projects by bringing together multiple technology areas under a common business and delivery responsibility. When participating already in the design phase, the possibility of effective coordination with short lead times also increases, which creates the conditions for stable delivery and smart, energy-efficient solutions”, says **Fredrik Allthin**, CEO Sweden, EVP, Assemblin Caverion Group.

The project is expected to last from April 2026 to July 2027.

“Assemblin, just like Coromatic, is a supplier that focuses on building sustainable and reliable solutions, and we look forward to working together on this project”, says **Christoffer Eklund**, Group Head of Large Scale, Coromatic AB.
